

Guy Gober, Innovation Fellow

Highlights

Favorite Experience: Through the Stanford University Innovation Fellows program, I have gotten to work with leadership at UGA on vertically integrated projects.

Skill Sharpened: I rapidly accelerated my networking skills, through working with fellow Fellows and through the Career Advancement opportunities available through SIFP.

Challenge Overcame: Understanding who I am as a teammate. Through the DISC profile, I've learned how to step up and step back in groups.

Rewarding Opportunity: I loved being a mentor to the IDEA 4000 class on the Delta project. I felt like I delivered real value and they were genuinely receiving my feedback.

What's Ahead: Post-graduation, I will pursue innovation through a startup I started while at UGA.

Meet Guy

Guy was sitting in his engineering classes that focused on building things and he kept asking, "How will I know if this is the right solution?" IDEA 4000 sparked his entrepreneurial knack and he finally had an avenue to ask questions about product market fit, value propositions, and driving value.

For Guy, he was proud to be part of SIFP, as it is "a culture of excellence." Working in interdisciplinary teams, Guy had the opportunity to work with students on campus bringing the best of their fields, which accelerated the success within their groups.

SIFP was an outlet for Guy to recognize his role as a changemaker on campus and beyond. The real-world projects offered through the Program illustrated how he could add value to potential teammates and companies after UGA.

"Opportunity begets opportunity. If you don't take that first step over the edge, the second step will never occur. I am glad I applied for SIFP, as so many incredible opportunities came from that first leap of faith."
